

License To Kill - Flea Control Preparation Sheet

Please complete the following steps to receive the best results from our flea control service.

Vacuum all carpeting and rugs thoroughly.

All floors, upholstered furniture (especially between and under couches) and pet areas should be thoroughly vacuumed. Particular attention should be given to pest harborages (i.e. baseboards, cracks and crevices). Dispose of the vacuum bags after cleanup.

Mop all wood, tile and vinyl floors.

Hot water wash all pet bedding. If disposing of bedding materials, seal contaminated bedding in plastic bags and place in outside waste.

Pick up all personal items (i.e. clothes, toys, books, plants, etc.) off the floors in all rooms.

Remove items stored under beds, under furniture and on closet floors.

Clear open foodstuffs from the counter tops.

Begin a vet approved flea treatment program such as Program or Advantage for all pets.

Remove pets from the home (prior to application). Store or cover all pet food containers and bowls. Cover fish bowls or fish tanks.

Secure any private, valuable or important items. We will be going through you entire home.

Be prepared to vacate the premises during service and for about 3-4 hours following service to allow time for chemicals to dry. You can re-enter your home after the treatment has dried.

After the treatment has been completed:

If an odor is noticed, ventilate upon re-entry to the treated area by opening doors and windows.

Do not clean the carpet or floors with detergents or cleaners for at least two weeks after treatment is complete. Cleaning after treatment will void an warranty provided by License-To-Kill.

Continue to vacuum daily for two weeks. Be sure to dispose of the vacuum bag (in an exterior trash can) after vacuuming.

Please Note: Flea activity may be observed for a couple of weeks after treatment. This is not unusual and may be due to newly hatched insects, which have not yet come into contact with insecticide. These fleas will eventually die.

Expect that if you have severe infestation that we may need to return for a followup visit. In most cases, we can eradicate your flea problem in one visit; however, you should be prepared for the worst. If the service technician believes that a follow-up will be necessary, he or she will advise you prior to any treatment.
